

COMMUNICATIONS CONNECTED

Why Choose Our Connectivity Solutions?

Arc Systems offer business grade data and voice connectivity services ranging from copper to fibre Ethernet to Unified Communications via 8x8 to integrated voice within Microsoft Teams.

For more traditional phone systems we also offer SIP solutions to get those calls running over your existing internet connection saving you a significant cost than soon to be retired ISDN services.

More than ever we need the agility to collaborate and remote work as if we are in the office, not just in IT Systems but also telephony.

Our Communication services meets businesses demand for a reliable, scalable and flexible communications and UC platforms, whether a small, medium or enterprise sized organisation with multiple sites or a single office.

Solutions

We combine voice, connectivity and mobile services into unified communications to keep businesses moving forward. You can access our leading edge solutions through our network of specialist partners or directly from us.

LEASED LINES

A leased line provides a fast, low latency and dedicated internet circuit for your business. This means you will not share your bandwidth with anyone else giving you total access to your bandwidth at any time of day. You can choose the line speed required and can increase this to the maximum circuit speed should your business needs change.

WAN

Our LAN implementations can cater for multigigabit and low latency connectivity with resilient switch design to make sure servers stay online. Additionally, our WAN connectivity offers High-Availability Firewalls and dual Internet links to keep branch offices and remote workers connected to the business with security being at the forefront of our design.

DSL, 4G & 5G

DSL connections offer a widely available internet connection across the UK. DSL services come in a few different variations with the most popular being FTTC that can offer up to 80mbps download speeds. 4G and 5G have become an increasingly popular method of connecting to the internet due to its reach, ease of installation and the high speeds. Options such as static IP addresses and large data packages are available.

REMOTE WORKING (SD LAN)

We offer the easy to use on demand SSLVPN connection, this is where software on your mobile device can connect back to the corporate network and allows you to access resources such as shared files or databases. We also offer SD-WAN technology to implement a more permanent secure office connection designed for remote offices or long-term home workers.

ON-SITE IT SUPPORT

Arc Systems is partnered with 8x8, a hosted telephone provider to offer an easy to deploy and full featured telephone system. 8x8's cloud-based system means you no longer require expensive and complicated hardware installed at your office.

WIFI

Managed Wi-Fi for internal and external locations. Full survey and heat map capability with bespoke designed Wi-Fi and infrastructure.
